Specification

1. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a ***single paragraph on a separate sheet*** within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

Drawings

1. New corrected drawings in compliance with 37 CFR 1.121(d) are required in this application because the subscripts located in Figures 1-3 are difficult to read. Applicant is advised to employ the services of a competent patent draftsman outside the Office, as the U.S. Patent and Trademark Office no longer prepares new drawings. The corrected drawings are required in reply to the Office action to avoid abandonment of the application. The requirement for corrected drawings will not be held in abeyance.

Allowable Subject Matter

1. Claims 8-14 are allowed.
2. The following is an examiner's statement of reasons for allowance: Although the disclosure of the combined prior art of VanDervort who teaches monitoring transmission variables and monitoring cells associated with virtual connections in an ATM, and Nieh et al who teaches monitoring and policing cell transmission variables associated with an ATM system they fail to suggest or teach deriving a first monitoring time from a first transmission rate, determining a theoretical arrival time for a next ATM cell using the first monitoring time, deriving a current monitoring time from a current transmission rate of the ATM cells wherein the current monitoring time is subsequent to the first monitoring time and before a further determination of the theoretical arrival time of the next ATM cell, correcting the theoretical arrival time if the current transmission rate is greater than the first transmission rate using the monitoring time.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Prenell P. Jones whose telephone number is 571-272-3180. The examiner can normally be reached on 9:00-5:30.

EXAMINER'S AMENDMENT

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows: The Abstract on the following attachment is the new Abstract re-written in a single paragraph on a separate sheet.

ABSTRACT

Modifying transmission variables as associated with the case of variable transmission rates of ATM cells of virtual connections within an ATM communication facility (ATM-KE), a theoretical arrival time (at_{letzt}), determined with the aid of a monitoring time (pt_{letzt}) derived from the transmission rate, is determined for monitoring the next ATM cell (z') with the aid of the monitoring procedure on arrival of an ATM cell (z) for a virtual connection (vx) and, if there is a change in the transmission rate, the theoretical arrival time (at_{letzt}) is corrected by the monitoring time (pt_{akt}).
